

Effective
Yard Management
Starts
HERE
**YVRD
TALLY™**

THE YARD TALLY,
BY FORESTRY SYSTEMS.
**EFFECTIVE INVENTORY
MANAGEMENT STARTS HERE.**

Manage your inventory in real time, from the palm of your hand.

Load Kilns, track Processes, manage Locations, and more.

Print bundle tags, and request your inventory data right on your yard.

PROGRAM OVERVIEW

Receive a Load: Receive green loads and enter estimated bundle records, as well as prestage for the stacking process

Stacker: Estimated tallies for bundles created quickly by a layer table setup routine.

Block Tally: Quickly and accurately tally bundles to compare with your footage.

Location Change: Many Yards need to track bundle movement for inventory levels, shipments, scheduling of kiln drying, and other bundle processes.

Load a Predryer: Predryers can be loaded by entering the bundles in the desired Predryer ID, and wirelessly transmitted to the Lumber System.

Load a Kiln: Kiln managers can load kilns in real-time while increasing their efficiencies and accuracy for kiln charges.

Load a Destacker: Destack bundles in real-time as they are taken apart at the destacker.

Load a Process: Enter bundle numbers to fill a Process ID.

Load a Transfer: Transfer bundles from one Yard to another in real-time.

Merge Bundles: Powerful function that allows the merging of up to 5 bundles to an existing bundle ID.

Order Picking: Picking bundles to fill an order is now quick and in real-time.

Block Tally: Bundle BFT may need to be an estimated tally - another way to enter Block Tally. The bundle's BFT are calculated by entering length, width, thickness, and layers.

Inventory Reconciliation: Yards regularly update their inventory volumes by performing a physical inventory count.

Bundle Request: Yards may enter bundle criteria and retrieve a report of real time matching bundle numbers.

Split Bundle: A powerful and time saving routine that allows pulling pieces of lengths from one bundle, then creating a secondary bundle.

Inventory Request: Yard Managers can perform inventory queries on their inventory levels by asking for any combination of lumber attributes and receive a summary report whenever needed.

Print a Tag: Print bundle tags by communicating with your Yardmaster Inventory and wireless printer.

THE COMPLETE SOLUTION

The **Yard Tally** is a must-have for total yard management, and is the ideal tool for handling yard activities, such as changing yard **Locations** or unloading **Kilns**. It is a comprehensive utility program, essential for the wireless, real-time movement and processing of your lumber packs. It gives users a **complete** lumber/tally process solution.

Details of all bundle processes can be uploaded to a PC running the **Yardmaster 2020 Lumber System**. The bundle information can be transferred via a wireless network. The wireless **Yard Tally** is the fastest and most efficient method to transfer bundle processes and movements to the **Lumber System**. The **Yard Tally** transmits your information to the host **Yardmaster 2020 Lumber System**, and allows real-time updates to inventory levels for all users to view.

Compatible with: Armor 16 Android Handheld

Sends To: Yardmaster 2020 Lumber System

Reports?: Yes

Tags?: Thermal Labels

Inventory Processes: 17

Downloading Methods: Wired and Wireless

Yardmaster Update Intervals: Real-Time

System Compatibility: Android 12

Touch Sensitive Features: Yes

Total Yard Management

Receive and process green loads

Track bundle movement

Recall inventory information on the fly

Print tags for new bundles

Compatible with wireless scanners

Pick bundles for orders in real-time
